Portfolio Objective:

Create a collection of articles that represent a student’s knowledge and ability dealing with geometry.

Directions for the portfolio:

This will be a showcase portfolio, which means that you need to put only your best work into it! Your goal is to create a piece of evidence that shows you have achieved each of the following standards and tasks. Make sure it is your best work! At the end of the semester, I will look through the portfolio and give you an overall geometry grade measuring whether you have mastered each of the standards. You will also be required to submit a one page reflection for each artifact explaining why you picked the artifact that you did, what you like about that artifact, what you dislike about the artifact, and finally, what you would change about the artifact. You need to do this for EACH standard in the portfolio.
