Your job is to create a song using the metric units of centimeters, millimeters, and kilometers as a part of the lyrics. Your goal is to help people visualize what the metric units look like by making reference to other real-life objects of similar size. Most importantly, you must also convert the 3 units of measure from metric to customary lengths of measure. The customary lengths of measure must also be included in the lyrics. You can even use the beat or tune of a song you already know just with different lyrics. (Songs must be approved by me first------No Korn or Linkoln Park)

As well as being the writer to your song, you must also be the singer of your song. Keep in mind, a good performance is one that is enthusiastic and looks like it has been rehearsed many times. You can even use the beat or tune of a song you already know just with different lyrics.

You should refer to the grading rubric for further details on how you will be graded.
